***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Ariglio et al (6,359,686).

Ariglio teaches of an inspection system for sheet material comprising a structure having a plurality of supply openings (64) distributed among a plurality of exhaust openings (66) and a source means in communication with said supply openings at a pressure selected to levitate a work piece, said exhaust openings being maintained at a pressure that enables a reverse flow of said fluid and specifically designed to provide the required float of the glass off of the table as well as maintaining flatness of the sheet (col 6; lines 49-57). Furthermore, Ariglio teaches of the supply openings (64) having a smaller cross sectional area than the exhaust openings (66) and wherein said supply openings outnumber said exhaust openings.
